## ProMark – digitization of time, job, planning and follow-up

**ProMark enables customers to plan the utilisation of the right resources at the right time and for the right job, and ensure that the resources are correctly paid for and in the most efficient manner.**

ProMark is a modular system that allows companies to opt for modules with the greatest value for them:

### TIME AND ATTENDANCE

Registration of work hours and deviation reasons validated against company and collective agreements creates the right payroll basis.

This eliminates manual processes and provides the correct payroll basis.

Modules: ProTime, ProTravel and ProNotify

### ABSENCE MANAGEMENT

Advanced handling of accrual, use and transfer of holiday.

Sickness management with distribution on the right accounts and workflows for follow-up and overview.

Modules: ProAbs Holiday and ProAbs Sickness

### TASK MANAGEMENT

Registration of employee activities (job, project and process) refines company ERP data for follow-up on resources and productivity.

This reduces production cost, enhances the delivery capability – and thus improves productivity.

Modules: ProJob, ProJect and ProOEE

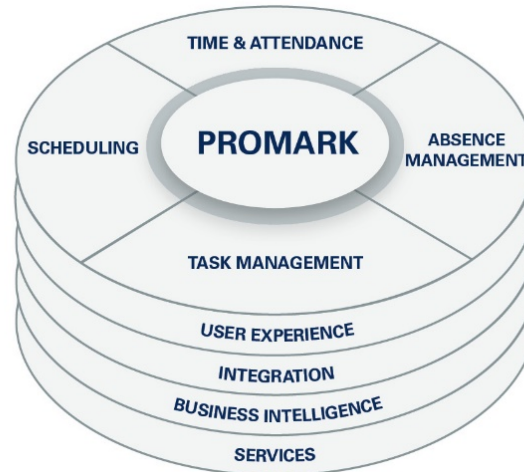

### SCHEDULING

Staff rostering and production planning for effective use of company resources and optimum handling of deviations.

This gives a precise and reliable overview of all the activities on the shop floor, helps minimise unplanned and expensive overtime and ensures that the company can maintain its delivery capability and flexibility.

Module: ProRoster and ProSchedule

### USER EXPERIENCE

Whether the company chooses to collect data via smartphones, portals and/or terminals, the employees get a simple and intuitive tool that eases registration of time and allows for a personal overview of various balances and approval of time, job and activity data.

This reduces administrative time and cost, ensures correct data available in real time and provides valuable insights to the management team.

Interfaces: ProTerminal, ProPC, ProPortal and ProMobile

### INTEGRATION

ProMark has standard integration to a number of payroll, HR and ERP systems. Hence, valuable and current information becomes available where it is needed when it is needed – without any risk of human errors or delays. At the same time, it reduces a number of administrative routines.

This leads to savings, optimises the company's ability to focus on what matters and increases efficiency.

Modules: ProHost and the access control module ProAccess

### BUSINESS INTELLIGENCE

The tool for analysis of real-time and historic data for measuring productivity, absence, savings as well as causal relationships.

This gives a clear overview of workforce management related issues, which can easily be distributed across the company, and increases the ability to make fact-based – and thus more qualified – decisions.

Modules: ProReport and ProBI

### SERVICES

In addition to the ProMark modules we offer hotline as well as various outsourcing options that ease the daily operation of ProMark:

Superuser service, private cloud, application management and hardware service.
